

Visitor Management Solution for Cleared Facilities

Keeping Your Doors Open & Your Assets Safe

✓ **Pre-Registration**

This module gives you the ability to pre-register a single person or large group of visitors.

✓ **Watch List**

This module provides the capability to maintain a watch list. Searches can be based on an individual or company name.

✓ **Check-In/Out**

This module allows guards to check visitors in and out of the system using government IDs. It also facilitates badge printing.

MATHCRAFT.COM

Security professionals need the best tools and technology available to safeguard our nation's most sensitive information. MathCraft Security Technologies is leading the way with software solutions that are always available and completely compliant.

ViSi Commander™ is a comprehensive visitor management and control software that can scan driver's licenses, passports, and other forms of government-issued identification to provide quick and accurate visitor tracking. It offers a built-in visitor processing workflow that is web-based and can support multiple sites and stations.

Always know who is on site and who is on their way with ViSi Commander's Guard & Receptionist functions and Meeting Pre-Registration modules.

USER ENGAGEMENT

When employees are active participants in visitor pre-registration, they become more accountable for the information they enter. With the support of automated and guided routing, ViSi Commander™ uses approval triggers to keep processes on track and in the right hands.

DATA SEGMENTATION

Data segmentation is the foundation of an effective information governance strategy. ViSi Commander™ segments information by compartmentalizing it based on facility codes. Users are granted visit-approval permissions to manage visits that require their attention without compromising data.

INFORMATION PROTECTION

ViSi Commander™ encrypts user and application data in transit using an industry-standard 2048-bit digital signature. PII data is encrypted at rest with FIPS 140-2 approved AES-256 symmetric key encryption. An added layer of Transparent Data Encryption safeguards sensitive data against unauthorized access outside of the database environment.

COMPLIANCE

With detailed data at your fingertips, your enterprise will never have to fear an audit again. ViSi Commander™ is used by organizations that must comply with 32 CFR Part 117, NISPOM Rule, and ITAR standards and regulations.

LICENSING AND TRAINING

Pay for exactly what you need with ViSi Commander's workstation-based licensing. Enterprises can easily scale from one workstation to hundreds without service interruptions.

HOSTING

ViSi Commander™ is available as an on-premises solution or via the cloud, hosted on Microsoft's FedRAMP-compliant Azure platform. With our SaaS model, you can have 24/7 system availability anywhere in the world.
